## **Objectives:**

Forex management may be defined as the science of management of generation, use and storage of foreign currencies in the process of exchange of one currency into other called foreign exchange. Knowledge of the forex management can help avoid harmful effects of international events and perhaps even profit from these events. With the advent of globalization and liberalization the scope for international trade and international financing has increased tremendously. International trade has grown more quickly than trade in general. This has necessitated the study of Forex management and derivatives by the finance executives.
